

2022 Highlights

A lot has been happening behind the scenes at Lightning. Now, at the midpoint of 2022, we would like to share with you some of the highlights and planned items.

Lightning Enhanced Pole Display

We introduced our new Lightning Enhanced Pole Display using our Lightning Android-based pole display software. It utilizes an 8" tablet for a perfectly sized, crisp, visual experience at the point of check out.

Here's how it can elevate your business. When the register is idle, streaming ads (non-audio) featuring products available in your retail segment will loop in intervals with attractive and vivid imagery.

The top of the 8" tablet will display your companies branding, such as your logo, instead of the generic image displayed on the left side.

Note: A separate license agreement will need to be signed to obtain an Enhanced Pole Display(s).

Five Credit Card Devices

Computer Perfect now offers you a wider choice in Credit Card Devices.

Five new credit card devices from Pax are now offered for Lightning and Emergency Mode: i.e. Pax S300, SP30, & A35 and two mobile units*, the A60 & A920. These devices are capable of working on both 4G and Wi-Fi networks so that you are always online. *4G, for emergency backup requires a cellular plan, from your credit card processor, which is approximately \$17.50 per month.

Note: Supply chain constraints continue to hamper a global rollout of these units, and pricing continues to be volatile.

System Improvements

We added an option to disable the clerk's ability to change the quantity, on the Ring Sales screen.

Default setting allows a clerk to click in the 'Qty' box to alter this value.

When this ability is disabled, notice the 'Qty' box

Via: Administration / Setup / Global Setup / POS Options - Allow clerk to quickly change qty on the Ring Sales screen by touching the qty box.

And, so much more...

Our development work continues, with a team of nine developers working exclusively on our Lightning platform.
