THE CREDIT CARD TERMINAL
THAT WILL MAKE ALL OTHERS
HISTORY!

After months of work, we recently added the first of four new credit card devices to our portfolio. The **PAX S-300** from PAX Technologies. Click the link above to view a short video of the PAX S-300.

Set-Up

The process is straight-forward, unplug your current device and plug in the new PAX S-300. Then a quick call to our technical support department from 9 to 4 Eastern Time Monday - Friday, to enable a minor change in the backend. And voila, you're all set.

Caveat

In view of worldwide supply chain delays, we have been only offering these units to our EPSG clients.

Non-EPSG clients would be placed in queue and will be subject to a yearly $195 maintenance fee per store (not per device) for the yearly SSL update process.

Additional Devices

In the coming months, we will also offer three additional devices:

-Pax A60
-Pax 920
-Ingenico Lane 5000

Interested?

Just use the link below to communicate your interest in switching to PAX - S300 or if you still need answers to any questions.
